Profile

Engineering leader with 15+ years of building mobile apps and SDKs, 10 of them leading teams. At *Anyline* I have led the same core engineering team since 2022 through several reorganizations and rounds of layoffs. Leadership kept me as team lead through each of them, and my team took on more scope every time. Today one team of five engineers handles the work of four former teams. All of Anyline's SDK and cloud development runs on the agentic engineering workflow I designed.

Work Experience

2022/01–ongoing

Senior Software Engineer & Team Lead at computer-vision company *Anyline GmbH*, maker of on-device OCR and scanning SDKs. Hired to lead the Mobile team and led it continuously as it grew to 14 engineers, including two sub-teams with their own leads. Carried out the reductions in my own team through every restructuring (engineers I had to let go are among my LinkedIn recommendations) and kept the rest of the team stable and delivering. **Today one team of five carries the work of four former teams**, having absorbed the shared Core, the *Tire Tread* SDK and Cloud at the same release cadence.

Fully remote leadership of a team spread across Vienna, Graz and two sites in India, with a daily team sync, a culture of written documentation, and retrospectives every six weeks. Designed the sub-team structure with the CTO; engineers from the team grew into leading their own sub-teams. Hiring manager in about 30 first-round and 15 second-round interviews, including roles outside my own specialty (iOS, Cloud) and Engineering Manager hires. Owned the engineering roadmap together with Product and handled key customer escalations directly.

Designed the agentic engineering workflow that all of Anyline's SDK and cloud development runs on: a layered routing system that gives AI coding agents the context and conventions of every repository, and an AI-assisted, multi-pass code review integrated into CI.

Responsible for delivery of SDK releases v37 to v56 across native Android and iOS and five cross-platform wrappers, and prioritized moving the team to agile continuous delivery. Moved all CI to *GitLab CI* and replaced an external build vendor with self-hosted Mac build infrastructure. Led a "Road to 0 Security Vulnerabilities" program (static analysis, penetration-test remediation, removal of hardcoded secrets). Prepared engineering for the yearly ISO 27001 audits, including the initial setup. Introduced *Antora* as the SDK documentation platform.

Public version: personal details withheld. Full CV available on request.

2016/04–2021/12	**Lead Android Developer** at *iTranslate GmbH*, leading Android development (team of three) for *iTranslate* and *Typeright*. Owned the full Android lifecycle, including architecture, development, releases, and evaluating impact through app metrics. Joined as the second employee and grew with the company to over 40 people. The role shifted to architecture, planning, code reviews, and the hiring, evaluation and termination of team members.
2014/04–2016/03	**Project management and full stack software engineering** at augmented reality and mobile apps specialist *CodeFlügel GmbH*. Completed all seven client projects, including four native Android apps and *NodeJS* backends, leading teams of three to eight.

Selected Writing on my blog, blog.rubbad.uk

2026/10	*In Which We Measure Software Engineering Before and After Agents*: what changed once a small team worked with AI agents.
2026/03, 2026/10	*In Which We Give Our AI Agent a Map* (update): context routing for AI agents.
2026/07	*In Which I Interview Four People and Their Intern*: interviews where candidates work with an AI agent.

Knowledge

Leadership	Hiring (including Engineering Managers), performance reviews, 1-on-1s, candid feedback (Radical Candor), retrospectives, quarterly and roadmap planning, release management
Engineering Practice	Agentic engineering with AI coding agents (Claude Code, Codex), CI/CD ownership, continuous delivery, version control (Git), application security, ISO 27001, architecture communication (C4), docs as code
Mobile and SDKs	Android (primary), iOS, cross-platform (Flutter, React Native, Expo, Cordova, .NET, Kotlin/Compose Multiplatform), SDK distribution (Maven, CocoaPods, npm, NuGet, pub.dev)
Programming	Kotlin, Java (strong background); C++, Swift, Dart, TypeScript/JavaScript (working knowledge)
Languages	German (native), English (fluent), French, Latin, Spanish (basic)

Education & Training

2022–2023	*Leadership To Go*, leadership program by Ferry Fischer (EEE Focus Consulting, Vienna). 10 half-day modules, completed with an exam and certificate.
2010–2013	Graduate (MSc) studies in Telematics (computer science and electrical engineering) at Graz University of Technology (AT), graduated with honors. Master's thesis "Characterization and Modelling of Server Energy Consumption" at *Stratergia Ltd.* in Dublin (IE), with University College Dublin. Exchange term at Kennesaw State University (US) in 2011.
2006–2010	Undergraduate (BSc) studies in Telematics at Graz University of Technology (AT). Bachelor's thesis "3D Features for Action Recognition".

Personal Projects

2014–2020	Android app *Where the hell are you?* (100,000 downloads), an instant-print photo box for my own wedding (Android, Raspberry Pi, Python), and a Home Assistant smart home.

Public version: personal details withheld. Full CV available on request.
